

AWS VPC

**CREATE NEW VPC WITH SUBNETS
ROUTE TABLES, INTERNET GATEWAY**

Amazon VPC

Internet gateway

DAY 24 HYBRID MULTI CLOUD COMPUTING

SUMMARY:-

1. In today's session we saw the importance of Infrastructure as a service, network as a service, subnetting, routing table, Internet gateway, NACL
2. VPC: VPC is a isolated network for cloud resources. VPC gives you more control over how your resources communicate. There are no additional charges for creating and using VPC in AWS.
- 3.(NACL)Network Access Control Lists is a security layer for your VPC that controls the traffic in and out of one or more subnets.
4. If you do not explicitly create NACL, then the default NACL automatically associated with the subnet.
5. A subnet can be associated with the single Network ACL at a time.
6. When ssh remote login is done to public IP, it connect you to the private IP. For achieving this and for going outside the world we have to set the gateway using routing tables and associate our subnet with this routing table. So it will tell our subnet about the location of gateway.
7. IG:-There is only one IG present in one VPC. One public facing router in aws is known as internet gateway which contains one rule for DNATING in router.
8. Dividing a network into two or more networks is called subnetting. AWS provides two types of subnetting one is Public which allow the internet to access the machine and another is private which is hidden from the internet.
9. If we have 256 IPs, (total:5 ips are reserved) Starting IP is always reserved for Network name , last IP is always reserved for broadcasting, IP-1 reserved for router, IP-2 reserved for DHCP server and IP-3 reserved for further coming. So remaining 251 IPs we can allocate to our VMs.
10. Learned to configure IG, Route tables, private and public subnet in our own vpc.
11. we are not able to remote login through SSH to the Instance which has private IP.
12. Multiple subnets are created in order to manage security and services.

AWS Management Console

AWS services

Find Services
You can enter names, keywords or acronyms.

VPC
Isolated Cloud Resources

AWS Firewall Manager
Central management of firewall rules

Detective
Investigate and analyze potential security issues

Route 53 Resolver
Route 53 Resolver provides recursive DNS for your Amazon VPC and on-premises networks over VPN or Direct Connect.

All services

Build a solution
Get started with simple wizards and automated workflows.

Launch a virtual machine
With EC2
2-3 minutes

Build a web app
With Elastic Beanstalk
6 minutes

Build using virtual servers
With Lightsail
1-2 minutes

Stay connected to your AWS resources on-the-go

Download the AWS Console Mobile App to your iOS or Android mobile device.

VPCs > Create VPC

Create VPC

A VPC is an isolated portion of the AWS cloud populated by AWS objects, such as Amazon EC2 instances. You must specify an IPv4 address range for your VPC. Specify the IPv4 address range as a Classless Inter-Domain Routing (CIDR) block; for example, 10.0.0.0/16. You cannot specify an IPv4 CIDR block larger than /16. You can optionally associate an IPv6 CIDR block with the VPC.

Name tag	LW1VPC
IPv4 CIDR block*	192.168.0.0/16
IPv6 CIDR block	<input checked="" type="radio"/> No IPv6 CIDR Block <input type="radio"/> Amazon provided IPv6 CIDR block <input type="radio"/> IPv6 CIDR owned by me
Tenancy	Default

VPC > Internet gateways > Create internet gateway

Create internet gateway Info

An internet gateway is a virtual router that connects a VPC to the internet. To create a new internet gateway specify the name for the gateway below.

Internet gateway settings

Name tag
Creates a tag with a key of 'Name' and a value that you specify.

Tags - optional
A tag is a label that you assign to an AWS resource. Each tag consists of a key and an optional value. You can use tags to search and filter your resources or track your AWS costs.

Key	Value - optional
<input type="text" value="Name"/> <input type="button" value="X"/>	<input type="text" value="pk_internet_gw"/> <input type="button" value="Remove"/>

[Add new tag](#)
You can add 49 more tags.
